Tabla de la Distribución Normal Estándar

Dado un valor x , esta tabla nos devuelve la probabilidad:

$$P(Z > x) = 1 - F_Z(x)$$

Utilización de la tabla de la distribución normal.

Esta tabla nos permite calcular probabilidades de la forma $P(Z > x)$ donde Z es una variable aleatoria con distribución $N(0, 1)$ y x es un número de la forma $a, bc = a, b + 0,0c$. El valor de dicha probabilidad se encuentra en el cruce de la fila a, b con la columna $0,0c$.

Ejemplo: para calcular $P(Z > 1,23)$ se busca en el cruce de la fila 1,2 con la columna 0,03, donde se encuentra el valor 0,10935.

En el caso de que se desee calcular la probabilidad de que Z sea mayor que un número negativo, se puede proceder aprovechando la circunstancia de que la función de densidad de Z es simétrica y por tanto $P(Z > -x) = P(Z < x)$.

Ejemplo: Se desea calcular $P(Z > -1,37)$. Por simetría, $P(Z > -1,37) = P(Z < 1,37)$. Asimismo, de las propiedades de la probabilidad se tiene que $P(Z < 1,37) = 1 - P(Z > 1,37) = 1 - 0,08534 = 0,91466$, donde el valor 0,08534 se ha encontrado en el cruce de la fila 1,3 con la columna 0,07

A la inversa, si se desea encontrar el valor x tal que $P(X > x) = \alpha$ para un valor α dado, hay que buscar el valor más próximo a α en el interior de la tabla. El valor x será el que corresponda a la suma de los encabezados de la fila y columna en que se encuentra α .

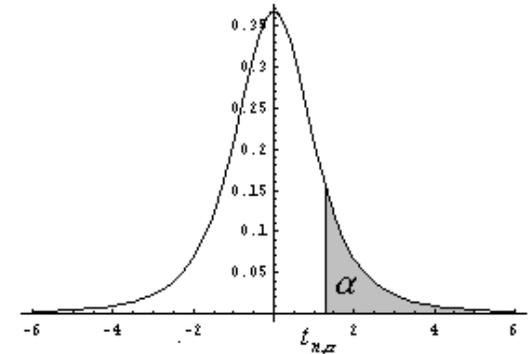

Ejemplo: se desea encontrar el valor x tal que $P(X > x) = 0,05$. El valor más próximo a 0,05 lo encontramos en el cruce de la fila 1,6 con la columna 0,05 (donde se muestra el valor 0.04947). Por tanto $P(X > 1,65) \cong 0,05$, por lo que el valor buscado es $x = 1,65$.

Dados un valor de probabilidad α y unos grados de libertad n la tabla devuelve un valor $\chi^2_{n,\alpha}$, tal que:

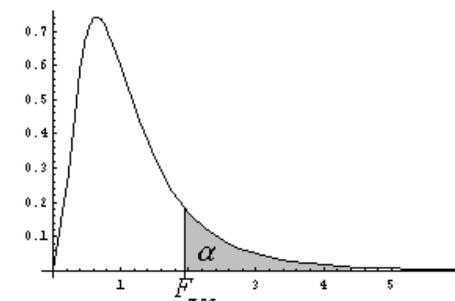

$$P(\chi^2_n > \chi^2_{n,\alpha}) = \alpha$$

DISTRIBUCIÓN F DE FISHER ($\alpha = 0.05$)

Grados de libertad (m)

Dado un valor de probabilidad α y unos grados de libertad n la tabla devuelve un valor $F_{m,n,\alpha}$, tal que:

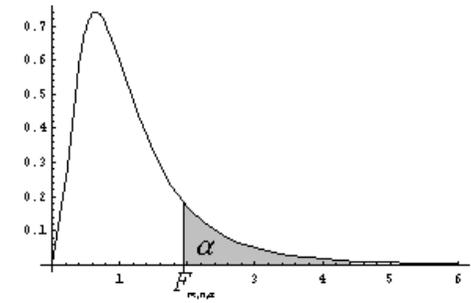

$$P(F_{m,n} > F_{m,n,\alpha}) = \alpha$$

DISTRIBUCIÓN F DE FISHER ($\alpha = 0.025$)
